S.#	Objective	Page #.	Date
1	Write a Python program to take input from the user and print the values using all data types.		
2	Write a program that input two numbers from the user and use all the arithmetic operators on them.		
3	Write a Python program that imports the datetime module and uses the following arguments: a. %A, b. %B, c. %C, d. %D, e. %H, f. %I, g. %S, h. %Y.		
4	Write a program that inputs marks of five subjects and calculate sum, percentage and grade		
5	Write a program that inputs a year from the user and find whether the year is leap or not.		
6	Write a program that inputs three unequal numbers and find the largest and smallest number.		
7	Write a program that inputs a value and decide whether it is Alphabet, Digit or neither.		
8	Write a program that inputs a number from the user and decide whether it is four digit number or not.		
9	Write a program that inputs the name of Logic Gate (AND, OR and NOT) and two Boolean values and then calculate the output accordingly.		
10	Write a program that inputs starting and ending range and print ONLY even numbers in reverse order using for loop.		
11	Write a program that inputs a number from the user and calculate factorial of that number.		
12	Write a program that inputs the ending range (N) and generate the following series without using library function. $1^1 + 2^2 + 3^3 \ldots N^N$		
13	Write a program that inputs a character and generates a pattern using nested for loop.		
14	Write a program that inputs an integer and decide whether it is palindrome number or not using while loop.		
15	Write a program to generate Fibonacci series till the inputted range.
